1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1- 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Addy et al in view of Kirkland et al .

Addy et al discloses operating system comprising receiving wireless time signal at receiver, supplying a time of day at output of receiver, automatically resetting receiver using wireless time signal where time of day different than time represented by wireless time signal, see abstract, paragraph 20, paragraph 27-29, paragraph 5, paragraph 11-

12. Addy et al lacks actuating moveable barrier operator. Kirland et al discloses movable barrier operator see paragraph 7. It would have been obvious to one of ordinary skill in the art to combine the system of Addy et al with moveable barrier of Kirkland for improved home security.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rosener et al discloses synchronizing clocks.
